# **OZONE**

### 1. PERFORMANCE

1) Measuring range : 100-1,000 ppm S0-500 ppm Number of pump strokes  $1/2(50m\ell)$   $1(100m\ell)$ 2) Sampling time : 1 minute/1 pump stroke

3) Detectable limit : 5 ppm (100m  $\ell$ )

4) Shelf life : 2 years

5) Operating temperature :  $0 \sim 40 \,^{\circ}\text{C}$ 

6) Reading : Direct reading from the scale calibrated by 1 pump stroke

7) Colour change : Dark blue → Yellow

#### 2. RELATIVE STANDARD DEVIATION

RSD-low: 10% RSD-mid.: 5% RSD-high: 5%

# 3. CHEMICAL REACTION

Indigo is oxidized and Isatin is produced.

## 4. CALIBRATION OF THE TUBE

COLOURIMETRY METHOD

# 5. INTERFERENCE AND CROSS SENSITIVITY

Substance	Interference	Coexistence
Nitrogen	Similar stain is produced.	The top of discoloured layer becomes unclear and higher readings are given.
Chlorine	"	"

### (NOTE)

In case of 1/2 pump strokes, following formula is available for actual concentration. Actual concentration  $= 2 \times \text{Reading value}$
